PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience building secure, layered backend applications using Spring Boot, Spring Security, and Spring Data JPA, including JWT-based authentication and MySQL persistence. Proficient in Core Java, OOP, Data Structures, REST API design, JDBC, Maven, and Git/GitHub workflows. Seeking an entry-level Java Backend Developer role to apply these fundamentals to production-grade systems.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript

Backend: Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, JDBC

Database: MySQL, PostgreSQL, MS SQL Server

Frontend: React.js, HTML, CSS, Tailwind CSS

Tools/Platform: Git, GitHub, Docker, Maven, Postman, IntelliJ IDEA

Core Concepts: OOP, Collections, Multithreading, Exception Handling, DSA

PROJECTS

E-Commerce Backend REST API [Github-Link](#)

Spring Boot · Spring Security · JWT · Spring Data JPA · Hibernate · MySQL · Maven · Git

- Designed and developed a layered e-commerce backend using Spring Boot, structuring the application into Controller, Service, and Repository layers for maintainability and separation of concerns.
- Implemented JWT-based authentication and role-based authorization (Admin/Customer) using Spring Security to secure REST API endpoints.
- Built REST APIs for product and category management, shopping cart operations, order and order-item processing, and address management, following MVC design principles.
- Modeled relational entities (User, Product, Category, Cart, Order, Address) using Spring Data JPA and Hibernate, with MySQL as the persistence layer, ensuring optimized entity relationships and query performance.
- Integrated centralized exception handling and request validation using @ControllerAdvice and Bean Validation to return consistent, standardized error responses across all endpoints.

JWT Authentication & Account Security System [Github-Link](#)

Spring Boot · Spring Security · Spring Data JPA · MySQL · JWT · Maven · Git

- Developed a standalone authentication microservice handling user registration, login, and secure session management using Spring Security and JWT.
- Implemented refresh token rotation to maintain user sessions securely without requiring frequent re-authentication.
- Built email verification and forgot-password/reset-password flows using token-based validation to secure account recovery.
- Engineered account logout logic that temporarily disables login access after repeated failed authentication attempts, reducing brute-force attack risk.
- Applied global exception handling and input validation to enforce data integrity and return meaningful error responses for invalid or expired tokens.

Bus Reservation System [Github-Link](#)

Java · JDBC · MySQL · Layered Architecture

- Built a console-based reservation system in Java using JDBC connectivity to MySQL for persistent data storage.
- Designed a layered architecture using DAO, Service, and Model classes to achieve clean separation between data access, business logic, and presentation.
- Implemented user and bus management modules along with a booking module supporting seat allocation and cancellation logic.
- Applied input validation and structured exception handling to prevent invalid bookings and handle runtime errors gracefully.
- Used PreparedStatements for all database operations to prevent SQL injection and ensure secure query execution.

EDUCATION

B.E. in Computer Science & Engineering

Hindusthan College of Engineering and Technology, Coimbatore

May 2026

CGPA: 8.62 / 10

Higher Secondary Certificate (HSC)

Rice City Matric Hr. Sec. School

May 2022

82%

Secondary School Leaving Certificate (SSLC)

Rice City Matric Hr. Sec. School

May 2020

83%

CERTIFICATIONS & ACHIEVEMENTS

- Java Foundation Certificate — Infosys SpringBoard
- Web Technologies Fundamentals — Infosys SpringBoard
- JavaScript — Infosys SpringBoard
- Consistently solved 300+ LeetCode problems - [Leetcode](#)
